

THRIVE PROSTHETIC FOOT CODE RECOMMENDATIONS

Medicare Codes, Descriptors and Reimbursement Range			
Code	Description	Floor	Ceiling
L5981	All lower extremity prostheses, flex-walk system or equal (K3 or above)	\$2,679	\$3,572
L5999	Addition to lower extremity prosthesis, progressive load damping system used in conjunction with an energy storing foot (non-removable).	\$600 <i>(suggested)</i>	\$800 <i>(suggested)</i>
		\$3,279	\$4,372

Functional Explanation for L5999 code: The progressive damping system allows the user to increase the axial load placed on the foot during activities that require heavier objects to be carried or loads moved that would typically exceed the products structural capabilities. Once an extra load is applied to the foot, the progressive over load spring will react to the weight by progressively stiffing the keel of the foot allowing a smooth safe weight transfer.
